

SQL Exercise

Questions:

1. Write SQL to find all the buildings where the owner's state is different than the building's state.
2. Write SQL to find a distinct list of owners and their states that own more than 20 buildings.
3. Write SQL to find all the buildings that do not have any owners.
4. *BONUS*: Write a PL/SQL function that accepts **owner_id** as an input parameter and returns a comma separated list of states and building counts that belong to that owner. Example: VA (4), MD(10)
